How Many Vulnerabilities Are Hiding in Your Codebase Right Now?

The GitHub Code Security Risk Assessment scans your top 20 repositories using CodeQL — free, one-click, zero configuration — and surfaces what no one has been looking at.

BEFORE
Scattered Visibility

AFTER
Consolidated Risk View

Free · One-Click · Zero Configuration · CodeQL Powered

◈ SEVERITY BREAKDOWN

CRITICAL	HIGH	MEDIUM	LOW
Immediate	Urgent	Review	Monitor

◈ FOUR DIMENSIONS OF RISK VISIBILITY

Vulnerabilities by Severity

Critical to low — prioritized across all scanned repositories with CodeQL precision.

Risk by Language

Breakdown across JavaScript, Python, Java, Go, C# and more — see which stacks carry the most risk.

Most Exposed Repos

Identifies your highest-risk repositories so teams can prioritize remediation effort.

Copilot Autofix Coverage

Shows how many issues can be automatically remediated by Copilot — turning findings into fixes.

◈ FROM SCAN TO ALIGNMENT — IN ONE MEETING

1
One-Click Scan
Free. No config.
Top 20 repos.

repo-level view.

→

3
Team Alignment
Security + Eng +
Compliance aligned.

→

4
Autofix & Act
Copilot remediates.
Teams prioritize rest.

◈ THE REAL IMPACT

Speed of Conversation Changed Everything

Security, engineering, and compliance leads were aligned around a **shared picture of risk** within the same meeting. That rarely happens without **months of tooling and process work**.

◈ WHY THIS MATTERS FOR BFSI

🏦

RBI Guidelines

Org-level vulnerability visibility mapped to regulatory requirements.

📋

Audit Cycles

Run before every audit — consolidated evidence in under 30 minutes.

🔗

Supply Chain Scrutiny

Pair with Secret Risk Assessment for full credential + code posture.

⚡

30 Minutes, Free

Zero config. Actionable security posture view — no procurement needed.

◈ ASSESSMENT AT A GLANCE
